

Overall summary

\$60.8M

Revenue

\$25.9M

Profit

42.5%

Margin

Revenue against target, by month

Revenue by chain

Units sold by category

Revenue and profit by financial quarter

Revenue by state (a map in the report)

Date-wise analysis

Cumulative revenue gap vs prior-year month +5% (2017 only)

Financial-year revenue YTD (July-June; first FY partial)

Year-on-year revenue change, by month

Category deep dive

Each category by revenue and margin; bubble size is units sold (the report animates this by quarter)

Manager performance / revenue and margin

Sorted by margin. Territory size and product mix differ; these figures are not a causal manager ranking.

Price scenarios / revenue is not profit

ASSUMPTIONS, NOT A FORECAST

Volume multiplier = $(1 + \text{price change})^{\text{elasticity}}$. Unit costs remain fixed; all products change uniformly.

Baseline: \$60.8M revenue / \$25.9M profit. At +10% price and elasticity -1: revenue unchanged;

profit becomes \$29.0M (+12.3%). Real elasticity is not estimated by this dataset.
